Zend

DATASHEET

Zend Administration as a Service for IBM i
No In-House PHP Experience? No Problem!

Zend Administration as a Service tackles your toughest IBM i PHP application administration challenges. Our dedicated team directly manages installing, monitoring, maintaining, and updating PHP runtimes on IBM i systems, freeing your team to handle higher-order concerns.

Make Our Experts Your Experts

Managing PHP-based applications requires specialized skills that most IBM i shops don't have in house. With Zend, you get the PHP expertise needed to manage, install, configure, and monitor your IBM i-based PHP applications – without the costs of additional headcount.

Turnkey Installations & Custom Configurations

Zend Admin as a Service ensures ZendPHP and your web server are installed according to maintainable standards and configured to work with your extensions.

Infrastructure Management

Your team is busy delivering features to drive your business goals. Let Zend do the heavy lifting of PHP application infrastructure management. We will work to improve your application's availability, provide performance recommendations, and identify problems in your PHP applications before they impact the rest of your server.

Uninterrupted Performance Monitoring

Zend installs monitoring tooling in your infrastructure to provide continuous performance and health insight for your application, from the underlying system to the web server and PHP. This allows us to quickly identify issues, provide personalized performance recommendations, and deliver prompt alerts of application disruption or failure.

Weekly Reporting

Weekly reports are delivered to your inbox, containing insights, recommendations, and alerts.

Data Graphs and Visualizations

Reports include graphs and other visualizations to illustrate your application's performance trends.

Scheduled Security Updates

We implement all PHP security patches, bug fixes, and upgrades on your schedule, keeping your application secure and compliant while minimizing disruptions.

Simplify Your IBM i PHP Application Admin Today

Contact our team to learn more about how Zend Administration as a Service can take the stress out of monitoring and securing your IBM i PHP applications.
